

# Television in Your Room

## What You Need

---

Televisions must be cable-ready and able to receive at least 80 analog cable channels. "Digital-only" televisions will not work. You will also need a working coaxial cable (please contact us if you do not already have a one). Have the owner's manual for your television available.

## Cable TV Service

---

Arizona State University provides the equivalent of "expanded basic" cable TV services to all campus housing residents. ASU does not allow for cable upgrades or purchasing Pay-Per-View channels.

## Installing Your Cable TV

---

The following instructions are generic in nature and are meant to serve only as guidelines. Refer to your TV owner's manual for specific instructions for your model.

1. Connect the TV to the cable wall jack using a coaxial cable. If the TV has more than one input jack, select the one labeled "CABLE" or "CATV."
2. Plug the TV power cord into an electrical outlet and turn the TV power on.
3. Configure your set to receive CABLE or CATV signals, usually accessed through a MENU or SETUP option on the TV's remote control. Refer to your TV owner's manual for specific directions for your set.
4. Program the TV to receive channels (usually accomplished using the same MENU or SETUP option used above) by locating and selecting an option labeled AUTOPROGRAM. The TV will search through all channels and program the working channels. Refer to your TV owner's manual for specific directions for your set.

Your TV should now receive all campus channels. If you feel there is a problem with the cable wall jack, report it by submitting a maintenance request online at [workrequest.vpsa.asu.edu](http://workrequest.vpsa.asu.edu) or call the Technology Center at (480)-965-8565.
