

PLATE I.

a presence proved by means of boreholes separated unconformity
laid down near the fringes of a shallow sea.

formerly abundant extraction is difficult
strata overlain (teeth
spines) again deposited.

details differ as do faunas marked variations
mesh-like/conical erosion of adjacent surfaces.

(look for) un consolidated muds in rhythmic
sedimentation mounds nodules embedded in a loose
weathered matrix / streams traversing swamps.

changes (remain) of an unknown affinity

poles to bedding poles to cleavage

deepening and shallowing

In some situations.
